Professional Summary

Lead Engineer with 5+ years of experience architecting and delivering scalable frontend systems using React, TypeScript, Next.js, GraphQL, and Redux Toolkit. Skilled in frontend architecture ownership, component system design, accessibility (WCAG 2.1), performance optimisation, and testing (Jest, React Testing Library). Led a cross-functional team of 6 engineers across multiple SaaS workstreams, delivering measurable outcomes: 45% reduction in UI bugs, 40% improvement in architecture consistency, 30% faster PR cycles, and 30–35 engineering hours recovered per sprint through AI-assisted development workflows.

Key Achievements

- **45% reduction in UI bugs** — pattern-level debugging and systematic component audits across production applications.
- **40% improvement in architecture consistency** — component system designed and enforced across a 6-person team over multiple product workstreams.
- **30% faster PR merge time** — structured code review standards and direct mentorship of 3 junior engineers eliminated review-cycle churn.
- **25% faster feature delivery** — cross-functional delivery improvements spanning backend, design, and product across concurrent workstreams.
- **30–35 engineering hours saved per sprint** — AI-assisted development (GitHub Copilot, Cursor AI, Claude) adopted as team-level practice, not just personal tooling.

Professional Experience

Lead Engineer · Rapid Innovation LLP · Remote

Apr 2023 – Jan 2026

Promoted from Software Engineer after two years. Led frontend architecture and delivery standards for a cross-functional team of 6, across multiple concurrent SaaS product workstreams spanning fintech, internal tooling, and client-facing platforms.

- **Architected a reusable frontend component system** — standardised patterns across a 6-person team, reduced architecture inconsistencies by 40%, and cut repetitive development effort by 40% across separate product workstreams.
- **Drove a 45% reduction in UI bugs** through proactive monitoring, pattern-level debugging, and systematic component audits — shifting the team from reactive fixes to preventive engineering practice.
- **Established Jest and React Testing Library coverage standards** — introduced unit and integration testing practices across the team, improving release confidence and measurably reducing regression rate on production builds.
- **Led WCAG 2.1 accessibility implementation** — embedded ARIA labelling, keyboard navigation, focus management, and contrast compliance into the component library and code review checklist, making accessibility a default rather than an afterthought.
- **Recovered 30–35 engineering hours per sprint** by structuring AI-assisted development workflows (GitHub Copilot, Cursor AI, Qodo, Claude) as team-wide adopted practice across boilerplate generation, refactoring, and documentation.
- **Improved cross-functional feature delivery by 25%** — collaborated directly with backend engineers, designers, and PMs across varied product domains to scope requirements, manage handoffs, and ship on schedule.
- **Cut PR merge time by 30%** through code review frameworks, structured feedback, and direct mentorship of 3 junior engineers — reducing cycle time without compromising code quality standards.

- **Optimised frontend performance** using route-based code-splitting, memoisation, lazy loading, and bundle analysis — applied across production applications with real concurrent user load.

Software Engineer · Rapid Innovation LLP · Remote

Jun 2021 – Apr 2023

Individual contributor on product teams building React and TypeScript applications. Took on an architecture scope beyond IC expectations — work that directly contributed to promotion to Lead Engineer.

- **Designed and shipped composable React and TypeScript UI components** — built for reuse and stability as features and team size scaled; several became foundational to the later component system.
- **Owned end-to-end GraphQL and REST API integration** — from query design and optimisation through error handling, loading states, and client-side caching.
- **Introduced and documented Redux Toolkit state management patterns** — proposed, prototyped, and presented an architecture that was adopted as the team-wide standard.
- **Contributed to testing coverage with Jest and React Testing Library** — wrote unit and integration tests for critical UI flows, establishing early testing norms ahead of the formal standards introduced at Lead level.
- **Resolved production incidents across multiple client deployments** — performed root-cause analysis and applied architectural fixes rather than patches, directly informing later component system decisions.

Frontend Developer · Alnitek Innovative Solutions · Remote

Apr 2021 – May 2021

Contract engagement in a no-code product domain — a distinct design challenge from enterprise SaaS, requiring consumer-grade usability for non-technical end users.

- **Built a drag-and-drop chatbot workflow builder in React and Material UI** — zero-code interaction paradigm for non-technical users; reduced setup time and improved onboarding usability for a product-facing audience distinct from any other role in this resume.

Web Developer · Internship · Bitmap Technology · Pune

Jun 2019 – May 2020

- **Developed responsive, cross-browser websites using React.js, HTML5, CSS3, and JavaScript** — established the component thinking and responsive design fundamentals applied throughout subsequent roles.

Technical Skills

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Redux, Redux Toolkit, React Query, Styled Components, Vite, Webpack, Responsive Design

Testing: Jest, React Testing Library (RTL), Vitest, unit testing, integration testing, component testing

Accessibility: WCAG 2.1, ARIA, keyboard navigation, focus management, screen reader compatibility, accessible component design

Backend & APIs: Node.js, Express.js, REST APIs, GraphQL

Tooling & Platforms: Git, CI/CD, Figma, Jira, Firebase, Supabase, Netlify, Render, SonarQube

AI Development: GitHub Copilot, Cursor AI, Claude, Qodo (Codium), Tabnine, Roo Code

Architecture & Leadership: Frontend architecture, component system design, design system ownership, technical roadmap input, engineering RFC process, code review standards, cross-functional delivery, team mentorship

Education

Bachelor of Engineering, Computer Engineering · Sinhgad Academy of Engineering, Pune

2017 – 2020

CGPA: 8.3 / 10

Diploma in Computer Engineering · Shri Sai Polytechnic, Chandrapur

2015 – 2017

Score: 80.88%
